

#### **General information**

#### **Overview**

Coir (from Malayalam kayar, cord) is a coarse fiber extracted from the fibrous outer shell of a coconut. The individual fiber cells are narrow and hollow, with thick walls made of cellulose. They are pale when immature but later become hardened and yellowed as a layer of lignin is deposited on their walls. There are two varieties of coir. White coir is harvested from the coconuts before they are ripe. The fibers are white or light brown in color and are smooth and fine. They are generally spun to make yarn that is used in mats or rope. Brown coir is harvested from fully ripened coconuts. It is thicker, stronger and has greater abrasion resistance than white coir. It is typically used in mats, brushes and sacking. The coir fiber is relatively water-proof and is one of the few natural fibers resistant to damage by salt water.

#### **Designation**

Coir

#### **Typical uses**

White coir is in used in rope making and, when woven, for matting. White coir also used to make fishing nets due to its excellent resistance to salt water.

Brown coir is used in floor mats and doormats, brushes, mattresses, floor tiles and sacking and twine. Pads of brown coir pads are sprayed with rubber latex, which bonds the fibers together (rubberized coir); it is used as upholstery padding in the automobile industry.

### **Composition overview**

**Compositional summary** 

Cellulose (C6-H10-O5)n

Form Material family Base material	Fiber Natural Cellulose	Э		
Renewable content	100			%
Composition detail (polymers and natural n Natural material	naterials) 100			%
Price Price	* 0.113	-	0.227	USD/lb
Physical properties Density	0.0411	-	0.0434	lb/in^3
Mechanical properties				
Young's modulus	0.58	-		10^6 psi
Yield strength (elastic limit)	14.5	-		ksi
Tensile strength	19	-	20. 1	ksi
Elongation	15	-	40	% strain
Flexural modulus	* 0.58	-		10^6 psi
Flexural strength (modulus of rupture)	19.6	-	00	ksi
Shear modulus	* 0.21	-	0.0.0	10^6 psi
Poisson's ratio	* 0.383	-	0.000	
Fatigue strength at 10^7 cycles	* 7.83	-		ksi
Mechanical loss coefficient (tan delta)	* 0.0106	-	0.0139	
Impact & fracture properties Fracture toughness	3.03	-	10.2	ksi.in^0.5
Thermal properties	20.8		27.4	ustrain/°F
Thermal expansion coefficient	∠∪.0	-	21.4	µstrain/°F

### **Magnetic properties**

Magnetic type Non-magnetic

#### **Bio-data**

RoHS (EU) compliant grades?

# **Absorption & permeability**

Water absorption @ 24 hrs	* 1.8	-	2.2	%
Water absorption @ sat	9	-	11	%
Humidity absorption @ sat	* 3	-	3.67	%

# **Durability**

Water (fresh)	Excellent
Water (salt)	Excellent
Weak acids	Acceptable
Strong acids	Unacceptable
Weak alkalis	Acceptable
Strong alkalis	Unacceptable
Organic solvents	Acceptable
Oxidation at 500C	Unacceptable
UV radiation (sunlight)	Good
Flammability	Highly flammable

# Primary production energy, CO2 and water

Embodied energy, primary production	* 4.09e3	-	4.51e3	BTU/lb
CO2 footprint, primary production	* 1.52	-	1.68	lb/lb
NOx creation	0.00257	-	0.00284	lb/lb
SOx creation	0.00656	-	0.00725	lb/lb
Water usage	* 6.09e4	-	6.75e4	in^3/lb

# **Processing energy, CO2 footprint & water**

Fabric production energy	* 1.07e3	-	1.17e3	BTU/lb
Fabric production CO2	* 0.198	-	0.218	lb/lb
Fabric production water	* 28.5	-	42.9	in^3/lb

#### Recycling and end of life

Recycle	×			
Recycle fraction in current supply	8.55	-	9.45	%
Downcycle	✓			
Combust for energy recovery	✓			
Heat of combustion (net)	* 6.1e3	-	6.41e3	BTU/lb
Combustion CO2	* 1.39	-	1.46	lb/lb
Landfill	✓			
Biodegrade	✓			

# Geo-economic data for principal component

Principal component	Coir			
Annual world production	1.03e6	-	1.14e6	ton/yr

#### Main mining areas (metric tonnes per year)

Bangladesh, Ghana, India, Malaysia, Sri Lanka, Thailand, Vietnam

# **Eco-indicators for principal component**

Eco-indicator 95 2.99 millipoints/lb

**EPS** value

62.7 - 69.3
