#### The material

Bamboo is nature's gift to the construction industry. Think of it: a hollow tube, exceptionally strong and light, growing so fast that it can be harvested after a year, and - given a little longer - reaching a diameter of 0.3 meters and a height of 15 meters. This and its hard surface and ease of working makes it the most versatile of materials. Bamboo is used for building and scaffolding, for roofs and flooring, for pipes, buckets, baskets, walking sticks, fishing poles, window blinds, mats, arrows and furniture. Tonkin bamboo is strong and flexible (fishing poles); Tali bamboo is used for structural applications (houses or furniture); Eeta bamboo is the fastest growing and is used as a source of cellulose for the production of cellulose or Rayon.

#### **Compositional summary**

Cellulose/Hemicellulose/Lignin/12% H2O

#### **General properties**

Density	600	-	800	kg/m^3
Price	* 1.34	-	2.01	USD/kg
Date first used	-5000			

### **Mechanical properties**

Young's modulus	15	-	20	GPa
Shear modulus	0.8	-	1.36	GPa
Bulk modulus	0.77	-	1.1	GPa
Poisson's ratio	0.03	-	0.46	
Yield strength (elastic limit)	35	-	44	MPa
Tensile strength	36	-	45	MPa
Compressive strength	50	-	100	MPa
Elongation	2.88	-	5.5	% strain

Hardness - Vickers	2	-	12	HV
Fatigue strength at 10^7 cycles	* 25	-	35	MPa
Fracture toughness	5	-	7	MPa.m^0.5
Mechanical loss coefficient (tan delta)	0.012	-	0.022	

### **Thermal properties**

• •				
Glass temperature	76.9	-	102	°C
Maximum service temperature	117	-	137	°C
Minimum service temperature	* -73.2	-	-23.2	°C
Thermal conductor or insulator?	Good in	sula	tor	
Thermal conductivity	0.1	-	0.18	W/m.°C
Specific heat capacity	1.66e3	-	1.71e3	J/kg.°C
Thermal expansion coefficient	2.6	-	10	µstrain/°C

## **Electrical properties**

Electrical conductor or insulator?	Poor ins	ulate	or	
Electrical resistivity	* 6e13	-	7e14	µohm.cm
Dielectric constant (relative permittivity)	* 5	-	7	
Dissipation factor (dielectric loss tangent)	* 0.07	-	0.1	
Dielectric strength (dielectric breakdown)	* 0.5	-	1	1000000 V/m

## **Optical properties**

Transparency	Opaque

## **Processability**

Moldability	1	-	2
Machinability	4		

# **Durability: water and aqueous solutions**

Water (fresh)	Acceptable
Water (salt)	Acceptable
Soils, acidic (peat)	Acceptable
Soils, alkaline (clay)	Limited use
Wine	Acceptable

### **Durability: acids**

Acetic acid (10%)	Acceptable
Acetic acid (glacial)	Limited use
Citric acid (10%)	Acceptable
Hydrochloric acid (10%)	Excellent
Hydrochloric acid (36%)	Limited use
Liver of the state	

Hydrofluoric acid (40%)

Limited use  Nitric acid (10%) Acceptable  Nitric acid (70%) Unacceptable  Phosphoric acid (10%) Acceptable  Phosphoric acid (85%) Unacceptable  Sulfuric acid (10%) Acceptable  Unacceptable  Unacceptable  Unacceptable  Unacceptable		
Nitric acid (70%)  Phosphoric acid (10%)  Phosphoric acid (85%)  Unacceptable  Unacceptable  Sulfuric acid (10%)  Acceptable		Limited use
Phosphoric acid (10%)  Phosphoric acid (85%)  Sulfuric acid (10%)  Acceptable  Acceptable	Nitric acid (10%)	Acceptable
Phosphoric acid (85%)  Sulfuric acid (10%)  Unacceptable  Acceptable	Nitric acid (70%)	Unacceptable
Sulfuric acid (10%)  Acceptable	Phosphoric acid (10%)	Acceptable
, ,	Phosphoric acid (85%)	Unacceptable
Sulfuric acid (70%)  Unacceptable	Sulfuric acid (10%)	Acceptable
•	Sulfuric acid (70%)	Unacceptable

## **Durability: alkalis**

Sodium hydroxide (10%)	Unacceptable
Sodium hydroxide (60%)	Unacceptable

### **Durability: fuels, oils and solvents**

Amyl acetate	Limited use
Benzene	Limited use
Carbon tetrachloride	Limited use
Chloroform	Limited use
Crude oil	Limited use
Diesel oil	Acceptable
Lubricating oil	Acceptable
Paraffin oil (kerosene)	Acceptable
Petrol (gasoline)	Acceptable
Silicone fluids	Acceptable
Toluene	Acceptable
Turpentine	Excellent
Vegetable oils (general)	Acceptable
White spirit	Acceptable

# Durability: alcohols, aldehydes, ketones

Acetaldehyde	Acceptable
Acetone	Limited use
Ethyl alcohol (ethanol)	Acceptable
Ethylene glycol	Acceptable
Formaldehyde (40%)	Acceptable
Glycerol	Acceptable
Methyl alcohol (methanol)	Acceptable

### **Durability: halogens and gases**

Chlorine gas (dry)	Unacceptable
Fluorine (gas)	Unacceptable
O2 (oxygen gas)	Unacceptable

i EDUPACK						
Sulfur dioxide (gas)		Accepta	ble			
Durability: built environments						
Industrial atmosphere		Limited	use			
Rural atmosphere		Acceptable				
Marine atmosphere		Acceptable				
UV radiation (sunlight)		Good				
Durability: flammability						
Flammability		Highly fl	amn	nable		
Durability: thermal environments						
Tolerance to cryogenic temperatures		Accepta	ble			
Tolerance up to 150 C (302 F)		Accepta

#### **Environmental notes**

Bamboo is a renewable resource and is particularly fast growing, making it attractive from an environmental standpoint.

### **Supporting information**

#### Design guidelines

The stems of bamboo are hollow and jointed, and have an extremely hard, durable, outer surface. Its natural tubular structure gives it excellent bending stiffness and strength at low weight. It is joined by binding; fasteners requiring holes must be avoided. The wood is visually appealing and hardwearing, making it attractive for flooring and furniture as well as its other diverse uses.

#### **Technical notes**

Bamboo is a grass, not a tree. It grows most commonly in Indonesia, The Philippines and Southern Asia where it is one of the principal structural materials.

#### Typical uses

Building & construction; scaffolding; furniture; pulp & paper making; ropes; reinforcement for concrete; frames for early aircraft, pipes, baskets, walking sticks, fishing poles, window blinds, mats, arrows and furniture.
