#### The material

Zirconia, ZrO2, is a ceramic with an exceptionally high melting point -- 2760 C when pure. It has the highest useful strength and toughness at room temperature of all the readily available ceramics. It is used (with 5% CaO) as a firebrick, and, in sintered form (with MgO or Y2O3 additives) for high strength, high temperature applications. The exceptional toughness is imparted by transformation toughening: a change in crystal structure from tetragonal to monoclinic, with an associated change in volume of the ZrO2 crystals when subjected to stress at a crack tip. The volume expansion squeezes the crack shut, impeding crack growth. Transformation toughening is made possible by additions of magnesia, MgO, or yttria, Y2O3, to give PSZ (partially stabilized zirconia) or TZP (tetragonal zirconia polycrystal). Zirconia is also available as foam for thermal insulation and filtration, and as fibers, used to make fabrics that can tolerate temperatures up to 2425 C.

#### **Composition (summary)**

ZrO2, usually with additions of Y2O3, MgO and other oxides to enhance

### **General properties**

| Density         | 5.9e3  | - | 6.15e3 | kg/m^3 |
|-----------------|--------|---|--------|--------|
| Price           | * 18.7 | - | 27     | USD/kg |
| Date first used | 1962   |   |        |        |

### **Mechanical properties**

| Young's modulus                | 200     | - | 250   | GPa |
|--------------------------------|---------|---|-------|-----|
| Shear modulus                  | * 60    | - | 86    | GPa |
| Bulk modulus                   | * 160   | - | 212   | GPa |
| Poisson's ratio                | 0.3     | - | 0.32  |     |
| Yield strength (elastic limit) | 500     | - | 710   | MPa |
| Tensile strength               | 500     | - | 710   | MPa |
| Compressive strength           | * 3.6e3 | - | 5.2e3 | MPa |

| Elongation                              | 0      |   |        | % strain  |
|---|--------|---|--------|-----------|
| Hardness - Vickers                      | 1e3    | - | 1.23e3 | HV        |
| Fatigue strength at 10^7 cycles         | * 300  | - | 500    | MPa       |
| Fracture toughness                      | 6      | - | 8      | MPa.m^0.5 |
| Mechanical loss coefficient (tan delta) | * 5e-4 | - | 0.001  |           |

# **Thermal properties**

#### **Environmental notes**

Energy is consumed, and CO2 generated, in refining and firing zirconia components, but the processing is otherwise benign.

## **Supporting information**

### Design guidelines

Zirconia, ZrO2, has the highest useful strength and toughness at room temperature of all the readily available ceramics. The fine grain size allows extremely smooth surfaces and sharp edges. This, combined with its exceptionally high toughness, make it attractive for blades for paper cutting, engine components and wear plates. Technical ceramics are formed by the following steps.(a) Pressing, isostatic pressing, powder extrusion (for bars and tubes) or powder injection molding (for intricate, high-volume parts).(b) Green-machining in the unfired state, using standard tools.(c) Firing or "sintering" typically at 1550 - 1700 C for 12 to 20 hours; the part shrinks by about 20%.(d) Diamond grinding to achieve tighter tolerance and surface finish: +/- 10 microns is achievable. The cost of a ceramic part is greatly increased if it has to be diamond-ground. Thus design for net-shape sintering, eliminating step (d) is highly desirable. The standard tolerance for as-fired dimensions is +/- 1% or 125 microns, whichever is greater.

#### Technical notes

Stabilization of stabilized Zirconias is slowly lost on holding between temperatures of 1050K and 1450K. At ~1150K zirconia ceramics become electrically conducting.

### Typical uses

Bearing wear sleeves, microtools and tweezers, knife blades, replacement for steel in surgical applications, electrical and thermal insulation at high and low temperatures, cutting applications, extrusion and drawing dies, catalyst supports, cylinder liners, turbo-charger blades and other engine components for automotive applications, wear plates, thermal barrier coatings for turbine blades.
