

Description

Image

Caption

Al-SiC brake disc.

The material

Metal matrix composites are metals reinforced with ceramic particles. The most widely used are based on aluminum reinforced with particles of silicon carbide or alumina. The reinforcement increases the stiffness, strength and maximum service temperature without seriously increasing the weight. Production now exceeds 10,000 tonnes per year, at a cost of 2 - 5 £/kg.

Compositional summary

AI/10-40% SiC

General properties

Density	2.66e3	-	2.9e3	kg/m^3
Price	* 6.22	-	8.29	USD/kg
Date first used	1982			

Mechanical properties

• • • • • • • • • • • • • • • • • • •				
Young's modulus	81	-	100	GPa
Shear modulus	* 30.4	-	38.5	GPa

Durability: thermal environments

Tolerance to cryogenic temperatures	Excellent
Tolerance up to 150 C (302 F)	Excellent
Tolerance up to 250 C (482 F)	Excellent
Tolerance up to 450 C (842 F)	Unacceptable
Tolerance up to 850 C (1562 F)	Unacceptable
Tolerance above 850 C (1562 F)	Unacceptable

Geo-economic data for principal component

Annual world production, principal component	3.69e7	tonne/yr
Reserves, principal component	4.99e7	tonne

Primary material production: energy, CO2 and water

Embodied energy, primary production	* 827	-	914	MJ/kg
CO2 footprint, primary production	* 48.6	-	53.7	kg/kg
Water usage	* 250	-	750	l/kg

Material processing: energy

Casting energy	* 9.74	-	10.8	MJ/kg
Non-conventional machining energy (per unit wt removed)	127	-	140	MJ/kg

Material processing: CO2 footprint

Casting CO2	* 0.73	-	0.807	kg/kg
Non-conventional machining CO2 (per unit wt removed)	9.5	-	10.5	kg/kg

Material recycling: energy, CO2 and recycle fraction

√
* 29.1 - 32.2 MJ/kg
* 2.29 - 2.53 kg/kg
2.5 - 3.5 %

Environmental notes

The production of MMCs is energy intensive, but not otherwise damaging. Those based on aluminum can be made from part-recycled material, and the product itself can, in principle, be recycled.

Supporting information

Design guidelines

The attraction of metal matrix composites such as Duralcan is their stiffness-to-weight and strength-to-weight ratios, allowing weight saving in automobiles and sports equipment.

Technical notes

Metal matrix composites ('MMCs') are made by stirring finely divided silicon carbide (SiC) or alumina (Al2O3) particles into the molten metal, which is then cast ('Stir-casting'), or by mixing metal and ceramic powders and sintering, followed by forging or extrusion. The most widely used are the DURALCAN range of alloys based on the 6061 grade of aluminum alloy, with 10 to 30% silicon carbide or alumina.

Typical uses

Pistons; engine parts; brake discs, drums and calipers, drive shafts, mountain bike frames; precision instruments and sports equipment such as mountain bike frames and golf club shafts.
